

ChargePoint in the Workplace

The Challenge

Sustainability, facilities and transportation services officers must provide electric vehicle (EV) charging services for employees in a way that doesn't increase the burden on IT, parking, security or operations staff. As business needs change and demand for charging stations increases, it's critical to have the flexibility to adapt EV charging operations and report the on-going success of the EV charging program to upper management. Additionally, it's essential to maintain tight control over station access to ensure station availability when employees need to charge.

ChargePoint Delivers

ChargePoint® gives you everything you need to manage successful EV charging operations for employees with management tools, rich data analysis and 24x7 driver support. With ChargePoint, you have the flexibility to set up your EV charging operations exactly how you want them, with variable billing options, rights granting capabilities to lighten your operational load, and patent-pending ChargePoint Connections that streamline and simplify administration to help you govern station access while ensuring stations are consistently available when needed.

Employer Vision

"We are excited about the opportunity to directly support our employees' personal sustainability choices."

– **Kelly Shea, Program Manager,**
Sustainability, Symantec

"AMD's charging stations will support the development of the electric vehicle market."

– **Tim Mohin, Director, Corporate**
Responsibility, AMD

Streamline EV charging administration and operations

- Group stations together in logical ways for configuration, reporting and streamlined administration.
- Simplify and automate driver approval with ChargePoint's patent-pending Connections feature.
- Safely grant rights to other admins or third parties to lighten the operational burden on IT staff.
- Apply pricing policies for greater control over charging fees and usage.
- Integrate your HR, security or building management systems with ChargePoint through web services APIs for streamlined management.

Bill for charging the way you want to

- Define and set up charging fees by group, station or time of day, and collect fees via direct deposit.
- Combine per-hour and per-kWh charges.
- Charge by plug-in time or actual charging time.
- Specify preferred pricing groups, each with different pricing rules.

Keep employees informed and happy

- Ensure a good experience for your employees with station-side 24x7 driver support.
- Provide real-time availability status with the ChargePoint mobile app.
- Send automated notifications for various charging events (i.e. charging complete and charging interrupted).
- Allow employees to reserve stations.

Use detailed analytics for efficient planning, compliance and tax audits

- Track usage and costs with rich data, and create customized reports.
- Analyze station utilization to plan for growth.
- View the current occupancy status of all your stations at any time.
- Track greenhouse gas emissions avoided, supporting sustainability initiatives.
- Track and report on program success with usage, cost and emissions data.
- Quantify employee benefit associated with vehicle charging for tax purposes.
